

Display

writing down some notes for getting ssd1306 oled display to work on r3

to avoid using adafruit libs i try luma-oled which is available on pypi

<https://luma-oled.readthedocs.io/en/latest/python-usage.html>

```
apt install python3 python3-venv
```

add user and create python3 venv and activate it

```
frank@bpi-r3:~$ python3 -m venv .venv_display
frank@bpi-r3:~$ . .venv_display/bin/activate
(.venv_display) frank@bpi-r3:~$
```

install luma-oled package

```
pip3 install luma-oled
```

spidev needs compiler for target

```
aarch64-linux-gnu-gcc -pthread -Wno-unused-result -Wsign-compare -DNDEBUG
-g -fwrapv -O2 -Wall -g -ffile-prefix-map=/build/python
3.9-PN012d/python3.9-3.9.2=. -fstack-protector-strong -Wformat -
Werror=format-security -g -fwrapv -O2 -fPIC -I/home/frank/.venv_dis
play/include -I/usr/include/python3.9 -c spidev_module.c -o
build/temp.linux-aarch64-cpython-39/spidev_module.o
error: command 'aarch64-linux-gnu-gcc' failed: No such file or directory
-----
ERROR: Failed building wheel for spidev
Failed to build spidev
ERROR: Could not build wheels for spidev which use PEP 517 and cannot be
installed directly
```

```
apt install gcc python3-dev
```

at least gcc installs many dependencies which should be removed from router when all is done:

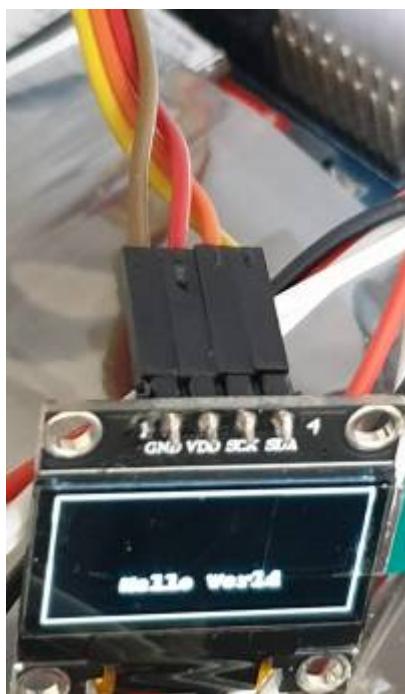

```
The following NEW packages will be installed:
binutils binutils-aarch64-linux-gnu binutils-common cpp cpp-10
fontconfig-config fonts-dejavu-core gcc gcc-10 libasan6 libatomic1
libbinutils libbrotli1 libc-dev-bin libc-devtools libc6-dev libcc1-0
libcrypt-dev libctf-nobfd0 libctf0 libdeflate0 libfontconfig1 libfreetype6
libgcc-10-dev libgd3 libgomp1 libisl23 libitm1 libjbig0 libjpeg62-turbo
liblsan0 libmpc3 libmpfr6 libnsl-dev libpng16-16 libtiff5 libtirpc-dev
libtsan0 libubsan1 libwebp6 libxpm4 linux-libc-dev manpages manpages-dev
```

alternative way: building wheels in chroot

```
apt install python3 python3-pip python3.11-venv  
python3 -m venv venv  
. venv/bin/activate  
pip3 install luma-oled #install into venv  
  
#next commands for creating wheel files (in a arm64 chroot) to avoid install  
compile-tools on router  
pip install wheel #needed for RPi.GPIO  
pip wheel --wheel-dir tmp luma-oled  
  
cd tmp  
tar -czf ../luma-oled.tar.gz *.whl
```

luma-oled.tar.gz

connect it (3v3,gnd,sda,scl)

```
root@bpi-r3:~# apt install i2c-tools  
root@bpi-r3:~# i2cdetect -y -r 2  
 0  1  2  3  4  5  6  7  8  9  a  b  c  d  e  f
```

```

>>> from luma.core.interface.serial import i2c
>>> from luma.core.render import canvas
>>> from luma.oled.device import ssd1306
>>> serial = i2c(port=2, address=0x3C)
>>> device = ssd1306(serial)
>>> with canvas(device) as draw:
...     draw.rectangle(device.bounding_box, outline="white", fill="black")
...     draw.text((30, 40), "Hello World", fill="white")
...
>>>

```

tried to get my rpi 3.5,, display working too, but gpio-lib is only for rpi

```
